

Oreoluwa Ogunleye

Data Science | Analytics

402-679-7409 | oreog2002@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Motivation:

I am passionate about **solving sports and business problems** using Data Science and Analytics. I systematically and creatively use my skillset to **add tangible value** to the team, the business, and the end-user. I am constantly learning and always looking to improve.

Education:

University of Nebraska at Omaha (UNO) | Omaha, NE

Master of Science in Mathematics, Concentration in Data Science

Expected Graduation: May 2027

GPA: 3.778

University of Nebraska-Lincoln (UNL) | Lincoln, NE

Bachelor of Science in Mathematics, Minor in Computer Science

Graduated: May 2025

GPA: 3.281

- **Fall 2024 College of Arts & Sciences Dean's Commendation List** | December 2024
- **Spring 2024 College of Arts & Sciences Dean's Commendation List** | May 2024

Core Competencies:

Programming: Python, SQL, R, CPLEX

Tools: GitHub, Microsoft Office (OneDrive, Word, Excel, PowerPoint), Google Suites (Docs, Sheets, Slides), LaTeX

Math: Linear Algebra, Statistics (Hypothesis Testing, AB Testing, Central Limit Theorem, Distributions, Survival Analysis)

Machine Learning: Linear Regression, Logistic Regression, Decision Trees, Random Forest, KNN, K-Means, Association Rule Learning, Causal Impact Analysis, Neural Networks

Relevant Course Projects:

Assessing Campaign Performance Using Chi-Square Test | Summer 2026

- Determined if there was a significant difference in signup rates between a cheap, low-quality mailer and an expensive, high-quality mailer for a grocery retailer's Delivery Club.
- Wrote Python code using the SciPy library to apply a Chi-Square Test for Independence to the campaign data.
- Discovered that while the high-cost mailer had a higher signup rate (37.8%) than the low-cost mailer (32.8%), the difference was not statistically significant.
- Findings kept the client from assuming higher-cost mailers are always better, which would result in spending more money without guaranteeing extra revenue.

"You Are What You Eat" Customer Segmentation | Summer 2026

- Used k-means clustering on grocery transaction data to split customers into distinct "shopper types".
- "Shopper types" could be used to better understand customers over time and to more accurately target customers with relevant content and promotions.

NBA Survival Analysis | Spring 2026

- Aimed to determine how long a player's NBA career usually lasts based on how high they were picked in their draft class.
- Fitted two AFT models and a Cox-PH model to compare each player's pick in their draft to their career points per game (PPG).
- Found that higher picks in the NBA draft often had longer careers.

Trends in Greenhouse Gas Emissions by State and Industry in the United States (2012–2022) | Spring 2026

- Investigated decade-long trends in U.S. greenhouse gas emissions using EPA state-level workbooks for a group project to compare sectoral impacts across 51 locations.

Data Science | Analytics

402-679-7409 | oreog2002@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

- Wrote Python code to clean, aggregate, and prepare the data for other project partners to use sector-clustering.
- Sector-clustering let them account for repeated measurements of emitted gas in certain locations and compare the trends between the states more easily.

Business Optimization Decision Models | Fall 2025

- Needed to maximize profit of steel beams and minimize costs in employment hours for Steelco Inc. and ToyCo Inc., respectively.
- Made a model in CPLEX and implemented the Excel data set into the model to find that optimal profit and cost.
- Wrote executive summaries and technical reports
- Maximum profit increased by over \$3.54 million for Steelco Inc., and minimum employment costs reduced by over \$131 million for Toyco Inc.

Visualizing Patterns in NBA Play-By-Play Data | Fall 2025

- Collaborated with classmates to analyze how small decisions and momentary shifts accumulated into the outcomes of the NBA 2024-25 season games.
- Ran R code using the hoopR package to develop models and data plots that showed foul frequency evolution, scoring runs, and key scoring thresholds.
- Presented findings in Google Slides, discovering that the most fouls occurred in the fourth quarter (12,484) and the least in the first (9,052), proving how fouls are a legitimate ball possession strategy in late-game moments.

NFL QB Performance Predictor | Fall 2024

- Tasked with developing a machine learning architecture to predict an NFL quarterback's performance metrics for sports betting and fantasy football applications.
- Utilized the nfl-data-py dataset and Python libraries (PyTorch, Scikit-learn, Matplotlib) to build and train a recurrent neural network (RNN), while reviewing code and managing the project's Overleaf documentation.
- Predicted five key quantitative metrics: passing yards, touchdowns, interceptions, completion percentage, and sack frequency.

Work Experience:

Department of Mathematics | UNO | Omaha, NE

Graduate Teaching Assistant (GTA) | August 2026 – Present

- Responsible for supporting students in learning College Algebra.
- Address course content using math knowledge and problem-solving skills, and work with professors and other GTAs to answer students' questions.
- Demonstrate organizational skills and attention to detail by accurately grading assessments on Canvas.

Department of Mathematics | UNL | Lincoln, NE

Teaching Assistant & Math Resource Center Counselor | September 2023 – August 2025

- Responsible for supporting students in learning Calculus I.
- Addressed course content using math knowledge and problem-solving skills, managed Zoom breakout rooms, and collaborated with other counselors to answer complex questions.
- Demonstrated organizational skills and attention to detail by accurately grading exams on Gradescope and tracking attendance on Canvas.
- At least 67% of the course evaluations from my recitation students said my study labs helped their learning.

Premier Oral & Maxillofacial Surgery | Omaha, NE

Document Assistant | January 2014 – December 2021

- Assigned to organize older paper documents and maintain accurate financial tracking for the surgical office.

Oreoluwa Ogunleye

Data Science | Analytics

402-679-7409 | oreog2002@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

- Sorted various documents—such as invoices, receipts, and letters—into respective categories, determined which required shredding, and organized finances.
- Maintained financial records by successfully calculating income and expenses while ensuring highly accurate, detailed paper document management.

Certifications:

Data Science Infinity

Data Science Professional Certification

- **Actionable Learnings:** Extracting & manipulating data using SQL. Application of statistical concepts such as hypothesis tests for measuring the effect of A/B tests. Utilizing GitHub for version control and collaboration. Using Python for data analysis, manipulation & visualization. Applying data preparation steps for ML, including missing values, categorical variable encoding, outliers, feature scaling, feature selection & model validation. Applying Machine Learning algorithms for regression, classification, clustering, association rule learning, and causal impact analysis for measuring the impact of an event over time. Machine Learning pipelines to streamline the ML pre-processing & modelling phase. Using Tableau to create powerful Data Visualizations. Turning business problems into Data Science solutions.
